The Enterprise. Unwired

"60% of organisations make gut feel decisions 50% of the time."

Management Association

"Although organisations are 'Data Rich', they are still 'Information Poor' and a majority of the business users today are still going on 'gut feel,' and not utilising the data from these systems to make effective business decisions."

Business Week

"That which cannot be measured cannot be managed, and that which cannot be managed cannot be organisationally pursued!"

Jack Welch

Quality is never an accident, it is always the result of an intelligent effort.

"The data warehouse by the BI Practice provides us with the ability to produce critical business information when we need it."

First National Bank

"With Sybase IQ, errors are detected promptly and fraudulent activities identified sooner."

Liberty Audit

OVERVIEW

The BI Practice, a Sybase Company, has taken business in a new direction. By ensuring your systems provide vital information and high quality data, you can transform the quality and intelligence of your business information to achieve optimum business performance.

In this highly competitive environment, you have to be sure that the information you are getting, when you need it, is relevant and of the highest quality.

If you are not getting this, then you should be looking at one of the most trusted business intelligence solutions providers

BUSINESS INTELLEGENGE

Our business is to transform your vast information assets into meaningful business insight. By combining trusted integrated data and quality information we enable you to keep a finger on the pulse of your business.

ABILITY TO EXECUTE

The BI Practice's major differentiator is its ability to utilise best of breed technologies to provide a complete, end-to-end business intelligence solution that will offer a guaranteed return on investment (ROI).

Our certified consultants offer highly sought-after skill-sets in the local industry, enabling our customers to leverage their investment in a Business Intelligence solution to its fullest potential.

With our proven methodology we have delivered highly successful Business Intelligence solutions in the local market for the past 8-years. With this ability to execute, we pride ourselves in enabling our customers to achieve their strategic objects.

"Our BI solution through the BI Practice provides us with up-to-the-minute information owned by business users, rather than by IT."

Harmony Gold

INTEGRATION

Integration of data across multiple systems gives you an enterprise-wide view of your business. We offer solutions and expertise to integrate and consolidate data from diverse and disparate sources, stored and managed centrally for fast and easy access.

DATA QUALITY

Data quality is a growing concern for most organisations. Information intensive applications such as Business Intelligence (BI), Enterprise Resource Planning (ERP) and Customer Relationship Management (CRM) can only achieve trusted results if the data they use is reliable, complete and accurate.

BUSINESS INSIGHT

A critical success factor in any large-scale Business Intelligence implementation is ensuring your target users can trust and access the data they need, when they need it, in the format that they need it to make better business decisions faster.

METADATA MANAGEMENT
